

Nirawit Jongprasartsuk

(+66)95-448-7851 | nirawit122005@gmail.com | LinkedIn : [Nirawit Jongprasartsuk](#) | Github : [lmtaeZ](#)

Computer Engineering student with interest in AI and web developments looking for solving real world problems with experiences in competitions and projects.

SKILLS & PROFICIENCIES

Computer Languages : Python, C++, Java, Javascript, HTML, GODOT

Libraries : Scikit-Learn, Pandas, Polars, Numpy, Matplotlib, Plotly, Seaborn, Pytorch, Tensorflow, Pycaret, Autogluon, Unsloth, Huggingface

EDUCATION SUMMARY

Chulalongkorn University | GPA 4.00 (2 semester)

Bachelor of Engineering in Computer Engineering

Bangkok, Thailand

Since 5 August 2024

Strisrinan High School | GPA 3.99 (SMTE)

Enrichment Program of Science Mathematics Technology and Environment

Nan, Thailand

2018 – 2024

Thailand Physics Olympiad (Tpho)

Bronze Medal

Bangkok, Thailand

2023

EXPERIENCES

AXONS – Data Scientist Part-Timer

Bangkok, Thailand

Price Suggestion Wet Market (CPF, 2025)

01/10/2025 – now

- **Designed and deployed** a fully automated **MLOps** pipeline on Google **Vertex AI** using **Kubeflow**, managing the complete lifecycle from data ingestion to model inference for fresh market products.
- **Engineered** a high-precision **XGBoost** regression model, leveraging complex time-series features (lags, rolling stats, and stock-to-order ratios) to forecast optimal daily price adjustments across multiple warehouses.
- **Integrated** forecasting results with a custom decision logic layer to translate raw model outputs into actionable "Increase/Stable/Decrease" pricing directives based on real-time inventory levels.
- **Achieved key results:** Streamlined daily operations by automating model training and prediction via Vertex AI Pipelines and Cloud Run triggers, significantly reducing manual intervention and standardizing evaluation metrics (F1-Score, MAE).

AXONS - Data Scientist Internship

Bangkok, Thailand

Makro Order Suggestion (CPF, 2025)

14/07/2025 – 14/09/2025

- Developed and implemented a two-part inventory optimization system to resolve a critical overstocking issue for over 20,000 products.
- Engineered a **Chronos Transformer model** for high-accuracy sales forecasting (MAE: 1.31, a **26% improvement** over the baseline).
- Integrated forecasting results with a custom **ForecastPolicy** order logic, based on supply chain theory, to calculate optimal order quantities.
- **Achieved key results:** Reduced stockout days by > 15%, decreased waste by **10%**, and improved average service levels to over **95%**, generating an estimated annual value of > **1,000,000 Baht**.

Super AI Engineer SS5 – Silver Medalist

SPAI SS5, Thailand
01/2025 – 10/2025

- **Achieved Top Silver Medal** (Top 10 overall) at the **Super AI Engineer ss5 Camp** for outstanding overall score and performance.
- Secured the **highest score on the AI Theory Exam** (Top 1) within the camp.

HACKATHONS

AIRA & AIFUL - AI HACKATHON Thailand

Bangkok, Thailand

WINNER

- **Secured 1st place** by developing a Loan Default (LOD) prediction model and devising a data-driven referral ecosystem strategy to optimize customer acquisition.
- Leveraged **AutoGluon** to engineer a robust ensemble model (Stacking/Bagging) with **CatBoost**, implementing advanced feature engineering on financial ratios and temporal data to maximize predictive performance.

WONGNAI - I-square Data science Hackathon

1st runner up

Bangkok, Thailand

- **Secured 2nd place on a competition leaderboard** by developing a motorcycle traffic violation detector that achieved a **0.99703 AUC score**.
- Fine-tuned a pre-trained Vision Transformer (**google/vit-base-patch16-384**) on an augmented dataset and refined performance using Bayesian optimization for hyperparameter tuning.

CP AXTRA – Sales Forecasting and Optimize Product Assortment

WINNER

SPAI SS5, Thailand

1. Product Assortment Optimization (1st Place)
 - Developed a classification model using a **RandomForestClassifier** to predict whether a product's stock should be increased, maintained, or removed compared to the previous four weeks.
 - Engineered various key features to train the model, leading to a **1st place finish on the Kaggle leaderboard**.
2. Sales Forecasting (2nd Place)
 - Built a highly accurate sales forecasting model using **LightGBM** (LGBM) to predict future product sales.
 - Achieved **2nd place on the leaderboard**, demonstrating strong predictive modeling skills.

Thinc HACKATHON - HENG DAILY

- Engineered a browser-based simulation game using the **Godot Engine**, implementing custom algorithms for fortune-telling and quest progression systems.
- Managed the end-to-end release pipeline, successfully deploying the application to <https://github.com/DeepAung/hengdaily> for public access.

Chula, Thailand

Intania Hackathon – Algorithm Architect

- Developed an educational block-based coding game (similar to Scratch) using **TypeScript**, **Node.js**, and **HTML/CSS**.
- Implemented a custom drag-and-drop interface and a logic execution engine to parse and run user-generated code blocks in real-time.

Chula, Thailand
